

* Installation of WIFI Driver

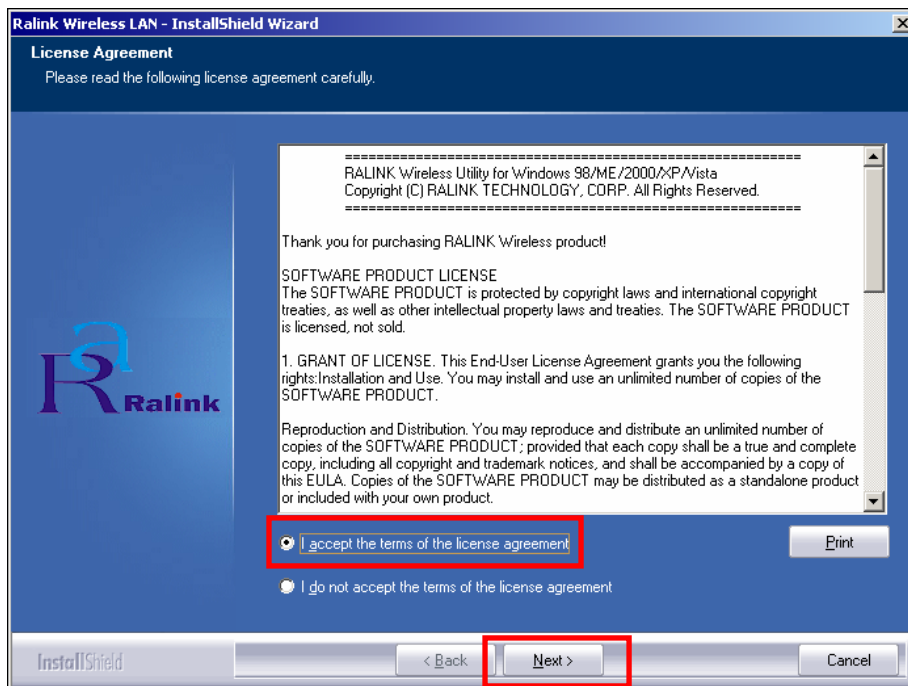

1) Run a '**Setup.exe**' file in a WIFI driver folder.

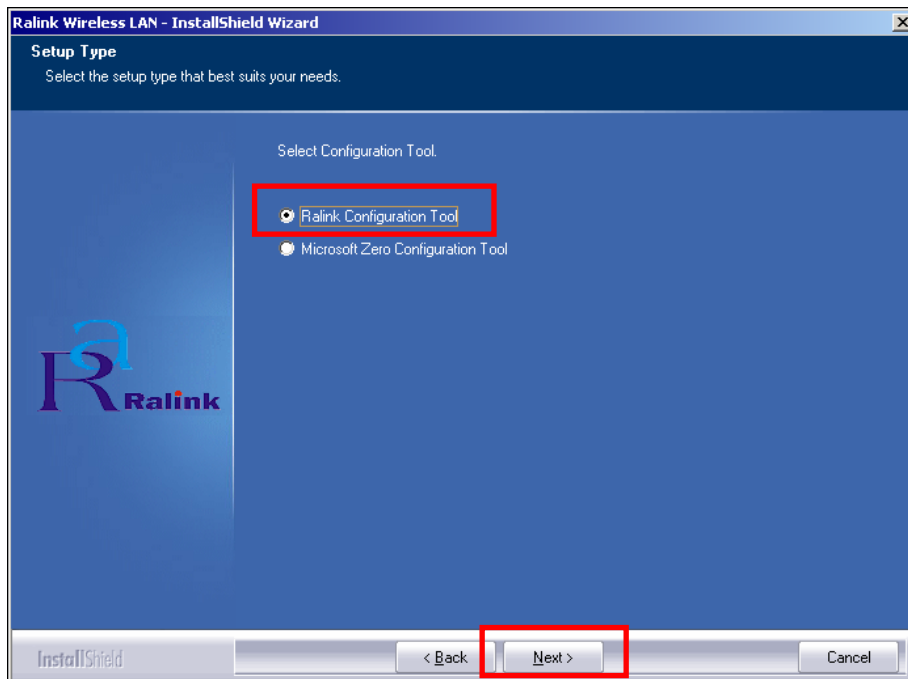

2) Select a setup language as '**English**' and click a '**Next**' button.

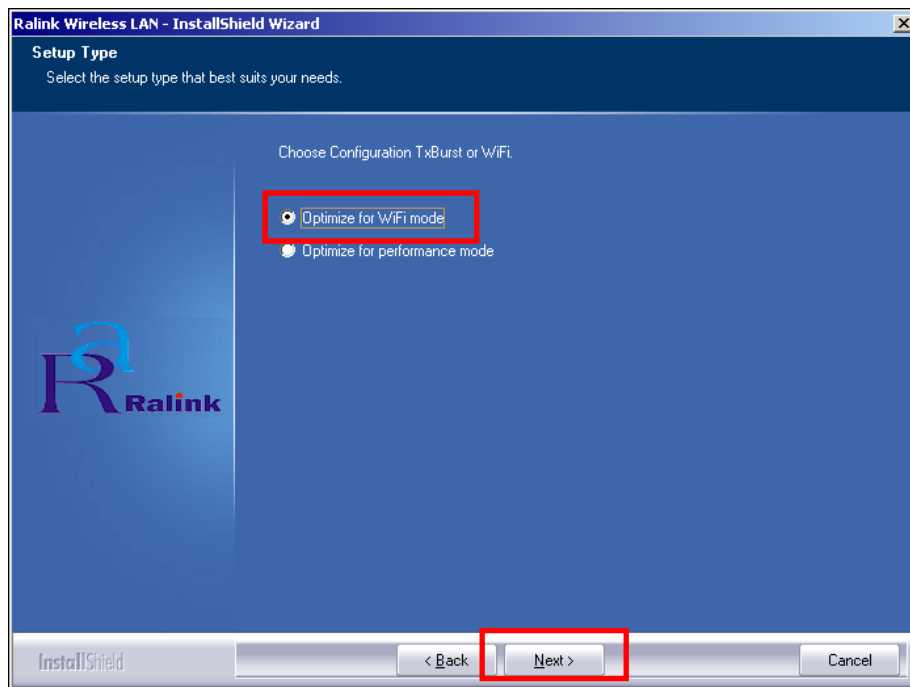

3) Select an 'I accept the terms of the license agreement' radio button. And click a 'Next' button.

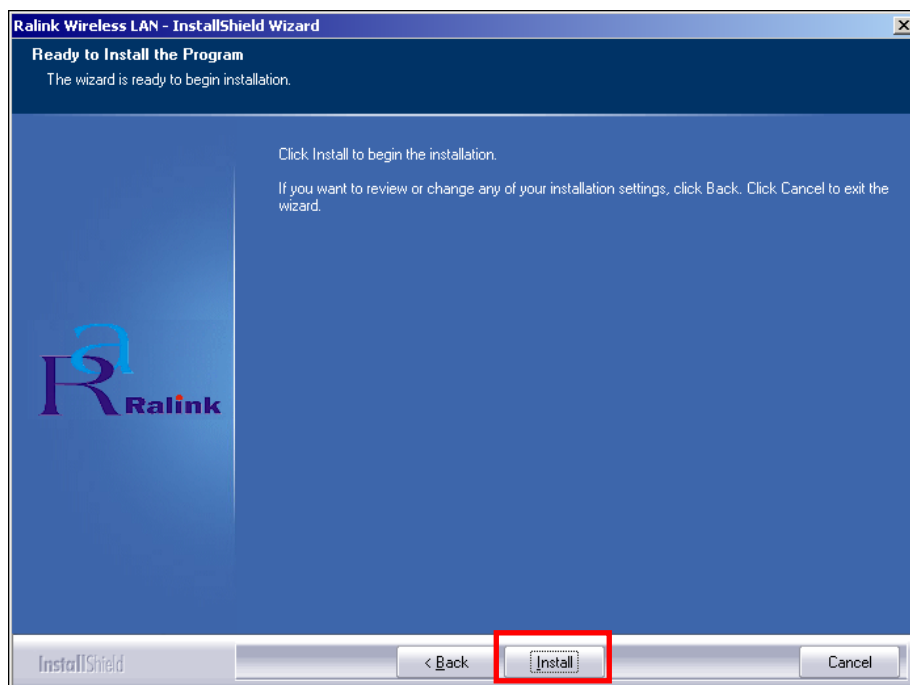

4) Select a 'Ralink Configuration Tool' radio button. And click a 'Next' button.

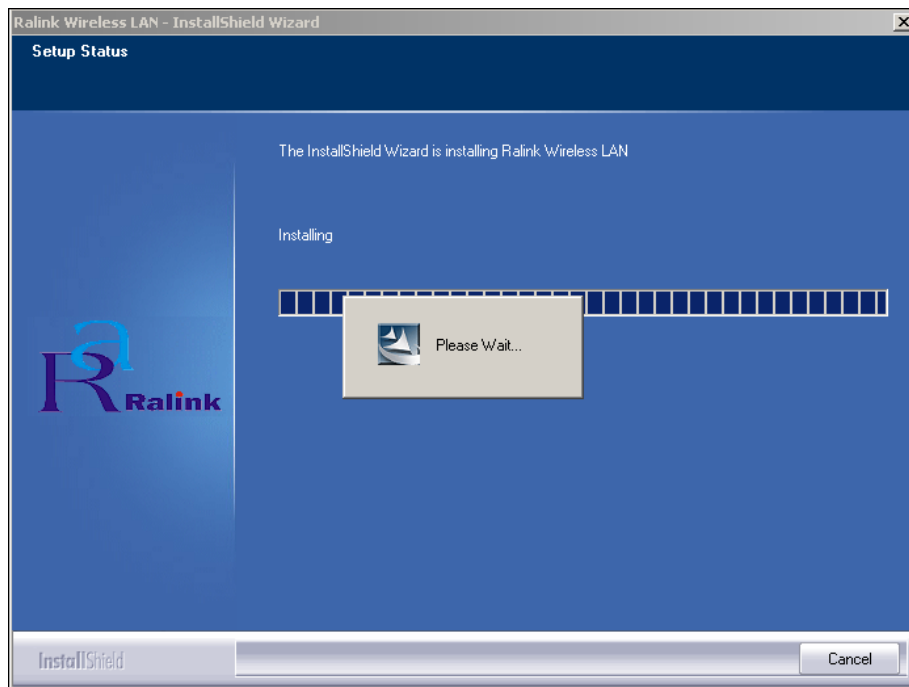

5) Select an '**Optimize for WIFI mode**' radio button. And click a '**Next**' button.

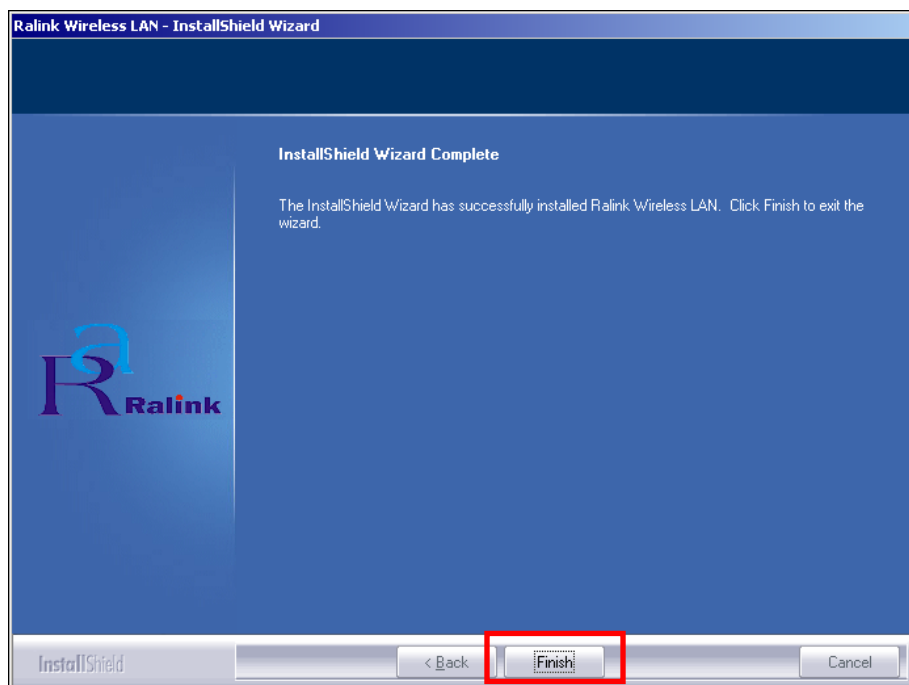

6) Click an '**Install**' button.

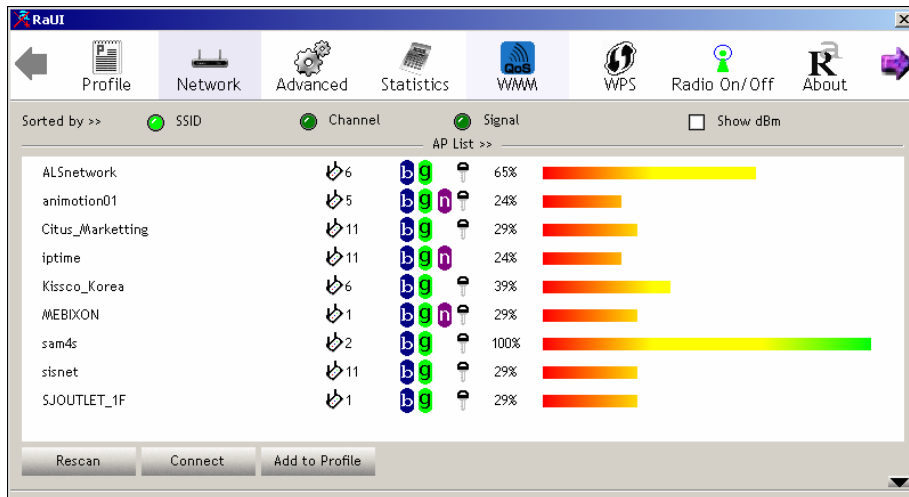

7) Installation procedure is proceeding.

8) Click a **'Finish'** button.

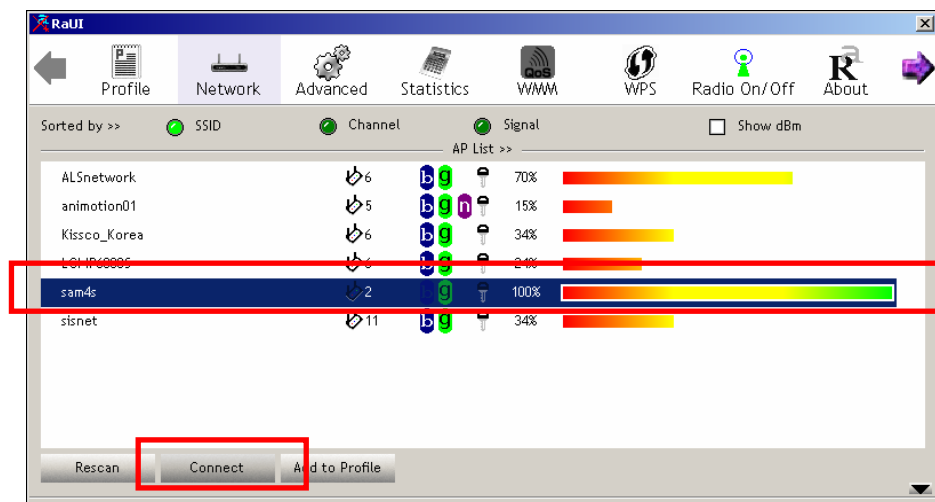

9) After a driver installation procedure is finished, a setup dialog of wireless network appears automatically like below.

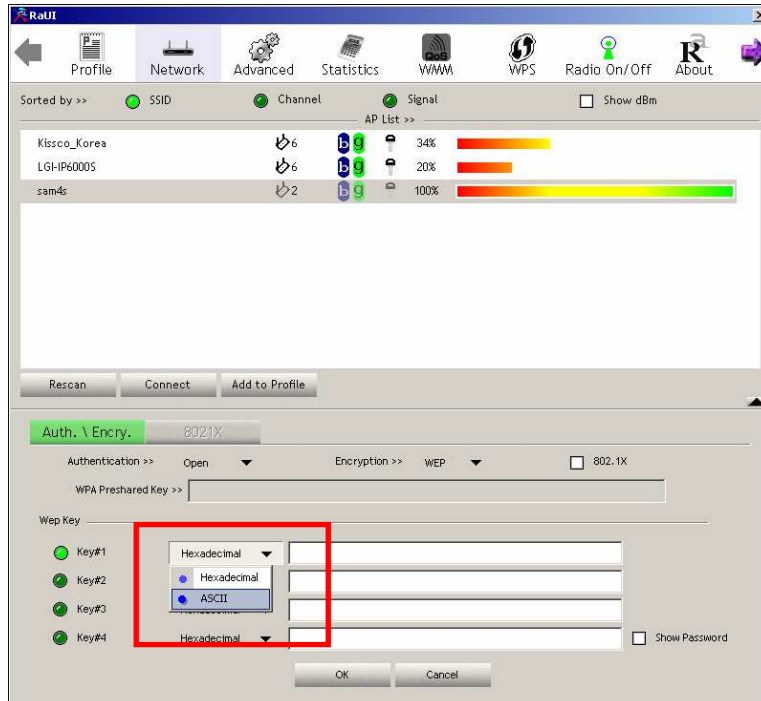

10) Select a 'SSID' of network you want to select on the list. And click a 'Connect' button.

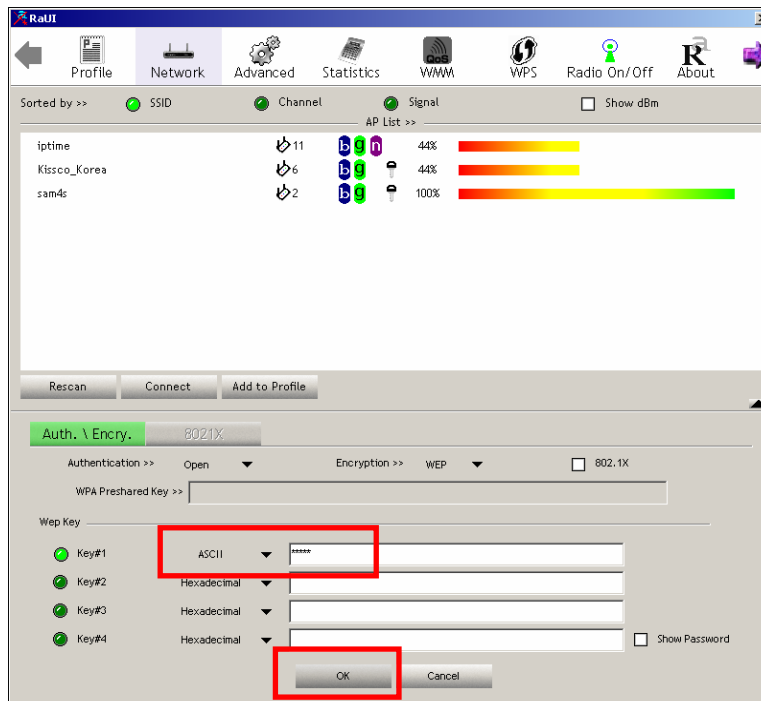

(※ 'SSID' is a name of wireless network.)

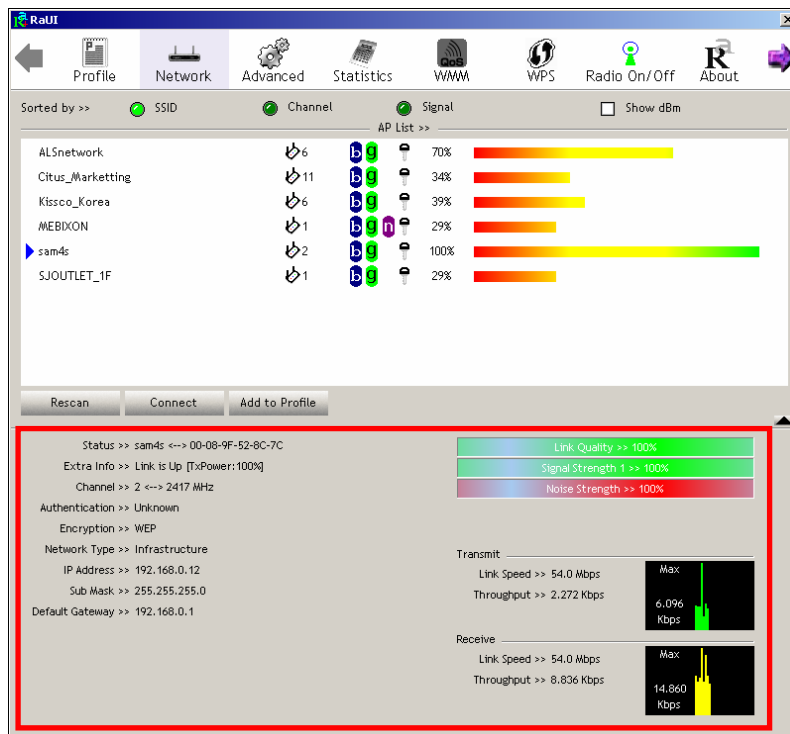

11) If your 'wireless network' has a password, Choose a password format like 'ASCII' or 'Hexadecimal' like below.

12) Insert a password and click an 'OK' button.

13) If a wireless network is connected successfully, current 'wireless network' information is shown like below.

14) You can find that 'Wireless Network Connection' icon is changed to 'Connected' in 'Network Connection' window.
